We do have several timelines, however, none of them have been updated since we've been working on our DOE grant application. Can we add this to the Draft Permit during the comment period(s)?

Damonica,

Thank you very much for your clarification. I appreciate that you looked into it for me. I did have another question (they keep on coming). Do you have an operations timeline, that is, a graphic or spreadsheet that lays out the anticipated time frame for drilling, logging, coring/samples retrieval, casing, injection, etc.? I would like to include such a timeline as an appendix to the permit so if this is possible I would appreciate your sending it to me. Thank you very much.

Hi Adam. I checked with the subsurface engineers about the rhodamine dye and they confirmed that it is one of several different tracers that we have the option of using during injection. The intent behind including its MSDS sheet in the UIC permit application was only to make EPA aware of the tracers that we are considering. Therefore, a specific permit condition that references rhodamine use is not needed because we have not decided to use it.

Damonica,

Rhodamine is listed in Appendix P-1. I am having difficulty finding it in the text of the application at the moment -- but I had included the use of rhodamine dye during the step-rate testing, per the applicant's request. This may be my mistake, but it's listing in Appendix P-1 leads me to believe that it is listed in the application. I'm sorry that I am having trouble locating the reference right now -- perhaps your operations engineers who designed the processes, specifically for the step-rate test, would have a sense of whether or not a specific condition needs to be inserted into the permit with regard to rhodamine use during the test. Thank you for following up on this.

Adam, I am having trouble finding a reference to rhodamine dye in the permit app. On what section/page did you find it?

Damonica,

C6 has proposed using Rhodamine Dye in its fluids during Step-Rate Testing. If you could provide a brief explanation for the use of the dye in that setting that would be quite helpful. Thank you very much.
